"chai aur code"

"Day 01:-   (Total 51 Lectures)

→   "Lecture 01:-
("Javascript for beginners)
"Goal to make real world projects:

→   "Lecture 02:-"
("Setting up environment in local
machine")
"Practical   Practice:-

test.js console.log ("Noor Fatima") ⟹ Print "Noor Fatima"
            ↓   on consale.
        "Ithas a special   ↳ "string value"
          meaning"

↳ we will use "test.js" file instead of "test.txt"
because our software understands "js" extension
instead of txt. So for "js" code we will
use "js" extension file.

→   Install node.js from "nodejs.org" site
    And   use   nodejs   to   run   js
code   locally.

    * command   to   check is   nodejs
installed is: • [node -v]

    * command   to   run   js code is:
            • [node test.js (Filename)]

Lecture 03:

(Save and work on github for Javascript online)

Lecture 04:

(Let, const and var ki Kahani)
- const
  var → cannot change.
- var
  const → changeable. • let ⇒ changeable

if (condition) {

}

∴ { } ↳ this is called scope.

Mostly, we used const and let not var, because if we change anything in var in 1st place, then it changed in all places. So, its very difficult for programmers.

Lecture 05:

(Learn about data-types)
